Tools and materials list 1

When working you will need to work out what tools and materials you need before you start. Before beginning the practical job, fill in the first tools and materials list (see table on following sheet) with everything you need. Remember to include things such as cleaning materials and filler.

While you are making the item, write out the second list, checking you have got everything you used on the list. Then compare this list with your first one and see if you have missed anything out.

Write all sizes in millimetres if applicable.

Assessing the risks

When working you will need to be aware of the risks involved with that type of work. There will be paints, tools, dust and other possible hazards around while you are working.

Using this worksheet, describe the things you have spotted, how you think this risk is being minimised, and how you can work safely. Compare your list with others in your group – see what you have missed out and what you have spotted that someone else has not.

Risk	How is the risk being controlled? How can you work safely?
What harm could be done?	
Risk	How is the risk being controlled? How can you work safely?
What harm could be done?

Paint a board

This activity involves painting two boards with a minimum area of 1 square metre. One board can be painted with emulsion and the other with primer (if required), undercoat and top coat. If desired, a background colour can be painted and then a design stencilled onto it. Your tutor will explain what is required before you start, and note on the feedback sheet what standards they are looking for. Marks will be awarded for things like good preparation and quality of finish.

When you have completed the job, mark the job yourself, thinking about what your tutor explained before you started. Think about what you could have done better and what you think you did really well. Your tutor will then mark the job. Write any thoughts you might have about this job, and the tutor will record any feedback if required. Keep this to refer to in the future.

There is a separate worksheet to write down material requirements for this job (Tools and materials list 2) and another to consider the risks involved (Assessing the risks).

How well did you do? Use this space for feedback.
